DICTIONARY-

Complied by Vladimir Tamari

The robot-alien-thingies originating from Jupiter's satellite Europa communicate using a language whose alphabet consists of electron spin states. During the years of captivity following my abduction I was able to compile this European-English dictionary. The glyphs show the spin states in a graphic manner for the benefit of astro-linguists. Others can simply use the Google-Microsoft electronic voice-European converter. Following my escape and return to Earth I wrote up what I learnt of European physics as best I could for the benefit of Earthlings as 'my' Beautiful Universe theory. <http://vladimirtamari.com/bu1.html>
 Free Earth! 
 -V.T.

 Interjection <Ha!>

Indicating triumph.

1. n. potential (electric) 2.
